Let's see what you made

TIME!

LAMOUTEUN-DAMENTALS

Divs

A <div> can be thought of as an empty container.

Divs

Divs nested inside of divs is how you establish the overall structure of your layout.

Divs

Creating the layout of your page, using divis, without any content, can be referred to as "greyboxing" or "blocking out" your layout.

KEW GSS PROPERTIES

CSS for Layout

There are a few key CSS properties for establishing layout, positioning, etc...

CSS For layout

display Set the display mode for an element

box-sizing Set how sizing is calculated

width / height Set the dimensions of the element

<u>position</u> Set the positioning mode for an element

<u>margin</u> Set the margin (spacing *outside*) an element

<u>padding</u> Set the padding (spacing *inside*) an element

top / bottom / Position an element relative to that location, based on what left / right position mode has been set.

CSS - The Box Model

The "box model" is the structure of content, padding, and margin that make up the total size of an element.

CSS - The Box Model

CSS - box-sizing

The box-sizing property lets you change the way the dimensions of your element are calculated.

The default value is 'content-box', but the alternate 'border-box' includes the border size and can make more sense for certain cases.

(https://developer.mozilla.org/en-US/docs/Web/CSS/box-sizing)

CSS - display

There are many <u>display</u> options each with their own flow behaviors. For now, we will be looking at <u>block</u>, <u>inline</u>, and <u>inline-block</u>...

(https://www.w3schools.com/cssref/pr class display.asp)

CSS - position

There are many <u>position</u> options, each behaving differently.

(https://www.w3schools.com/cssref/pr class position.asp)

CSS - position

There are many <u>position</u> options, each behaving differently.

(https://www.w3schools.com/cssref/pr class position.asp)

CSS For layout

<u>static</u> Default. '<u>left'</u> etc... are relative to the element's natural position

<u>absolute</u> Positioned relative to the *parent* element

<u>fixed</u> The element is fixed to a location in the browser window

<u>relative</u> Similar to static

G.B.A.P. DESIGN 4 UX BASICS

CSS For layout

<u>Contrast</u> Establishing visual contrast between elements of different type

Repetition Creating consistency and rhythm with elements and style

<u>Alignment</u> Establishing a reading-flow of your content through aligning

<u>Proximity</u> Positioning elements near one another that should be thought of together, or relation to one another.

HOMEWORK

Homework - Blocking out

Using paper or design software "block out" a layout for a small three-page website. Think about **C.R.A.P.** as you come up with your design.

Next homework, you will be turning this into a small website about an issue or cause you care about.

BYE!
